CSS Best Practices

Reset Default CSS

Use a CSS reset or normalize stylesheet to establish consistent baseline styles across browsers

```css
* {
    margin: 0;
    padding: 0;
}
```

SWIPE

Reset Default CSS

Use shorthand properties to keep CSS concise:

Without Shorthand:

```css
.element {
    font-style: italic;
    font-weight: bold;
    font-size: 16px;
    line-height: 1.5;
    font-family: Arial, sans-serif;
}
```

With Shorthand:

```css
.element {
    font: italic bold 16px/1.5 Arial, sans-serif;
}
```

Avoid using !important

Avoid using !important unless necessary to override specific styles:

```css
.button {
  background-color: blue !important;
}
```

Structure Style Sheet

It's always recommended to have a structured stylesheet for better organization, readability, and maintainability.

Without Structured

```css
.content {
  /*code*/
}

nav {
  /*code*/
}

footer {
  /*code*/
}

header {
  /*code*/
}
```

Structured

```css
header {
  /*code*/
}

nav {
  /*code*/
}

.content {
  /*code*/
}

footer {
  /*code*/
}
```

Flexbox and Grid

Use Flexbox or CSS Grid for layout instead of floats:

```css
/* Flexbox example */
.container {
  display: flex;
  justify-content: center;
  align-items: center;
}
```
